In vitro maturation of oocytes and ovulation were induced in heifers in two experiments. Oocytes were aspirated from the follicle of slaughter-derived ovaries after estrus detection by rectal palpation. Oocytes were cultured for 26 h in Tissue Culture Medium 199 supplemented with 0.1 micrograms/ml recombinant follicle-stimulating hormone (FSH) and 5 micrograms/ml cyclic adenosine 3':5'-monophosphate. In Exp. 1, a total of 456 oocytes from 3 heifers were recovered and matured in vitro. Of the oocytes that were recovered, 19.2% cleaved, 19.8% remained at metaphase II, 30.6% reached the pronuclear stage, and 27.1% were at the blastocyst stage after 8 days of culture. In Exp. 2, a total of 815 oocytes from 6 heifers were recovered and maturated in vitro. A total of 536 (65.9%) oocytes matured, and 284 (34.1%) oocytes remained at metaphase II. From a total of 30 oocytes matured in vivo, 19 oocytes (63%) developed into pronuclei and from a total of 29 matured in vivo, 12 oocytes (41%) reached the blastocyst stage. The follicular origin of the oocytes was determined by transfer of the oocytes into a recipient cow 7 days after in vitro maturation. In Exp. 1, 27 of 30 (90%) transferred oocytes were recovered. After 3 months, 26.8% of these transferred oocytes reached the blastocyst stage, and 63.2% of these blastocysts were derived from the transplanted follicle. In Exp. 2, a total of 47 of 88 (53%)
