Autodesk is a multinational software company best known for creating the first-generation 3D modeling software program, AutoCAD. It is now best known for its next-generation software programs such as AutoCAD 360. The Autodesk company was founded in 1976 by Bill Gates, Paul Allen, and Douglas Engelbart. The first office was in Palo Alto, California. The company now has offices in more than 15 countries. Autodesk has headquarters in San Rafael, California, and Portland, Oregon, in the United States. Its global headquarters are in Rose Valley, Ireland. Today, Autodesk has around 16,000 employees, of which a significant number work at its main office in the San Rafael neighborhood of San Francisco, and the rest in offices in the United States and internationally. In the United States, Autodesk is a wholly owned subsidiary of its parent company, Synteractive. In Europe, the company's headquarters are located in Ireland, with subsidiaries in Austria, Denmark, Germany, Norway, Sweden, and the United Kingdom. However, many third parties work with Autodesk to develop 3D applications, with different purposes and purposes. In November 2017, Autodesk acquired German software company Dassault Systemes for €5.2 billion. History Autodesk was originally known as Marchant. Marchant was founded by Gene Marchant in San Francisco in 1977 to create the first 3D computer-aided design software, and it was one of the first companies to create and distribute such software. The company moved to the Palo Alto area in 1981. Marchant was a leader in the computer-aided design (CAD) industry, particularly in the fields of reverse engineering and the AutoDesk InterDraw (ADI) file format. In 1985, Marchant was acquired by Computer Associates (later renamed CA Incorporated) and renamed Autodesk. At that point, Autodesk started to expand into the architectural, civil engineering, and engineering software fields, although the company's main focus was in the CAD market. Some of Autodesk's first software products were the Autodesk Architectural Design software (Autodesk Architectural Design was originally Autodesk Architectural 2D, and was first released in 1985), the Autodesk Civil 3D software, the Autodesk Land Desktop 3D modeling software, and Autodes

Canada has officially announced that an initial group of volunteers will be granted access to medicinal cannabis for research. Earlier this month, Health Canada granted the first approvals for 15 study participants, and the goal is to expand those approvals to include more than 50 participants by the end of 2017. Since all the participants are members of a research group, a collective will be formed in order to allow for expanded and consistent access for study participants. The Vancouver Area Network of Drug Users (VANDU) will begin collecting information from participants about their use of the drug, as well as their experiences using it. "Participants will be invited to attend a baseline research interview; provided with access to an evaluation kit to collect urine samples; and be enrolled into a process of self-reported data collection via telephone and internet," Health Canada said in a statement. The aim is to gain further knowledge on cannabis usage, as well as how it impacts people's lives and health. "The primary reason for the creation of the collective is to offer the social and medical benefits of the drug to our members, in addition to the research benefits that we hope to obtain," said Norma Jean Lee, who runs the Vancouver VANDU chapter, in a statement. You need to enter the name of the project. A novel approach to study crystallization of lysozyme by means of the thermal absorption technique. A novel approach to investigate crystallization of lysozyme was demonstrated. The thermal absorption technique was applied for this purpose. The crystallization of lysozyme under various conditions including the pH and salt concentration was studied. The time-dependent absorption and the temperature-dependent absorption were recorded at 360 nm in aqueous buffer solutions. The apparent absorbance at time t , $[A(t)]$, was analyzed to determine the initial solubility and the crystal growth rate constant, k . The results indicated that the concentration of salt, pH, and temperature have an important role in the crystallization of lysozyme. The initial solubility and the crystallization rate constant were dependent on the initial concentration of salt and pH. The results suggested that the thermal absorption technique might be used to study the kinetics of protein crystal growth.

It's official: Apple just broke the record for the most money raised through a single Super Bowl ad. Apple's "Hey Siri" ad, which told the story of a hearing-impaired couple who could not answer their loved ones' questions because they didn't understand them, has raised more than \$14 million for the American Speech-Language-Hearing Association, according to a report in the Wall Street Journal. Apple's previous record was \$9.3 million, which was achieved by the "1984" ad for Nike's 2012 "Dream Crazy" campaign. Apple's "Hey Siri" ad was widely praised, while one critic suggested it was tone-deaf, because the hearing-impaired couple's real-life interactions with Siri have not gone smoothly. Apple declined to comment. "Asking Siri 'How are you?' can be daunting for anyone, especially for those who use sign language," John W. Appleton, a former ASHA president and CEO, told the Journal. After the commercial aired, Appleton wrote a letter to CEO Tim Cook asking him to change the ad's script. "I don't think it made sense to have 'Nike' appear on the screen at all, not to mention the impact of what looks like a little girl's computer reading a story to her parent," he wrote. "It was perhaps the most tone-deaf commercial of all time." Apple has said that it would donate the majority of the money to
