Field of the Invention The present invention relates to a method for forming a plurality of conductive layers, and more particularly, to a method for forming a plurality of conductive layers using a circuit design that provides an interlayer electrode with an effective aspect ratio. 2. Description of the Related Art In a semiconductor device, a conductive layer used to form a gate electrode, a bit line, a word line, or the like may be formed of polysilicon or a metal layer. Recently, due to the demand for high speed and high integration of a semiconductor device, a metal line layer is mainly used to form the conductive layer. The metal line layer may be formed of a single metallic material or a metallic material containing a compound in order to improve the conductivity of the metallic material, and, for example, a tungsten (W) or a tungsten nitride (WN) layer is used. The tungsten (W) or tungsten nit 3e33713323
