manage your databases and database schemas and create, edit, delete catalogs and import/export. Catalogs are similar to databases but the schema is not. Catalogs can be read-only databases or read/write databases (like in MSSQL). Tables - here you can manage your tables (including the columns) and create, edit, delete tables and import/export. Tables are similar to the databases but with fixed schema. In each tab you can access the tables or views using a left pane. The left pane can be extended by holding the CTRL key. If you want to see the left pane extended hold the SHIFT key while clicking in a tab. In the left pane you have also the following buttons: + - table creation 1 - table editing 3 - table deletion 4 - table modification 5 - table export 6 - table import 7 - table synchronization 8 - delete all tables (if empty) 9 - alter table 10 - view tables 11 - export tabular data (if the tables contain data) 12 - create table 13 - create view 14 - export tabular data (if the tables contain data) 15 - import tabular data (if the

describes the SQL Master feature list. There are two ways to start SQL Master: from the Start menu, or from the command line. Start from the Start menu: From the Start menu, select SQL Master from the Start menu, then click to run the application. SQL Master features the following start-up options:

- \* In Additions mode the application starts with a new database and all the default tables, views and functions. You can also start it with one of the other database or database/function combinations provided in the Additions tab.
- \* In Table editor mode the application starts with an existing database and table. You can also start it with an existing table in a database that was created with the Database wizard.
- \* In Export mode the application exports a MySQL dump (for example, a text file). This can be used to create a new database and the tables that the dump represents. The exporting is done via the Export button on the main toolbar.
- \* In Select DB mode the application opens a database wizard that
