It has a single smooth, dull green to dark green leaf and up to fifteen small greenish-white or pale green and white flowers. It usually grows in moist places in well-drained soil. Description *Prasophyllum farnsworthi* is a terrestrial, perennial, deciduous, herb with an underground tuber and a single smooth, dull green to dark green leaf which is long and wide. Between six and fifteen greenish-white or pale green and white flowers are arranged on a flowering stem tall. The flowers are long and wide. As with others in the genus, the flowers are inverted so that the labellum is above the column rather than below it. The dorsal sepal is broadly egg-shaped, long, wide and dark green or reddish. The lateral sepals are linear to lance-shaped, long, wide and turn downwards. The petals are long and wide and have a white, green or purple central band up to wide. The labellum is long, has three lobes, is green with purplish lines and slightly curved, and is often glabrous. The sides of the labellum have hairy, widely spaced green or purplish tufts of calli with up to nine rows of long, toothbrush-like calli on the inner surface. Flowering occurs from May to July. Taxonomy and naming *Prasophyllum farnsworth*

A: You can use this code: `#include
#include #include #include using
namespace std; int main(void) {
vector a; srand(time(NULL)); for (int i
= 0; i > b; return 0; }` to generate a
random vector a of 100 elements,
sort it, and then display it. Then, you
can use this code: `#include #include
#include #include using namespace
std; int main(void) { vector a;`

```
srand(time(NULL)); for (int i = 0; i >
b; for (vector::iterator it = a.begin();
it!= a.end(); ++it) { if (*it == b) {
cout
```
