ObjectARX allows users to import and export drawing information. Using the information from the imported or exported drawing, users can save, modify, and create their own AutoCAD plug-ins. It is capable of generating C++, C#, VB.NET, and Visual LISP code. Developers can use the .NET API to build the custom components. The Autodesk Exchange App store supports AutoCAD for Android and AutoCAD for iOS mobile apps which allow users to access, edit, and save AutoCAD drawings from a mobile device. The object-based architecture of AutoCAD has supported AutoCAD as a software-development platform from the outset. It is now used as a primary vehicle for introducing new functionalities, features, and bug fixes. Engine design AutoCAD's model-driven approach has been supported by a series of progressively enhanced engines that evolved from the original MEP engine. These include MEP, Core, R14, R15, R16, and current R18. With the MEP engine in place, AutoCAD was offered as a product with a standard-set interface consisting of the familiar command line, the primary drawing pane, and the ribbon bar, and as a workgroup application. One of the most significant changes that the MEP engine introduced was to turn an architectural design tool into a full-featured drafting tool. By defining drawing content into an object-based model, a tool could be developed that could be shared with other objects. Drawing content was linked together, and a change to a piece of content would be reflected in all drawings in which that content was used. Thus, creating in AutoCAD was very much like creating in a word processor: the final result would be represented in a number of different ways, but the content itself remained constant. With the design of the entire architecture in mind, a tool set was developed that allowed the user to define drawing content through an editor, which would then be turned into a command, which would in turn be applied to a drawing. Thus, there is no longer any need for a drawing command line. Instead, the drawing tool bar (which represents the toolbar in all drawings in the drawing environment) is the command line. Along with the development of a new user interface, a new API had to be created to support the new design of the toolset. By integrating the user interface and the API in a single, consistent set of objects, it became possible to create drawing ca3bfb1094
