AutoCAD Architecture AutoCAD Architecture is a mobile app from Autodesk designed to give architects and planners a digital working environment for working with their Google Earth data in Google Maps. It does this by showing your Google Earth data as a 3D model in your mobile device. It is also available as a web app. Google Earth is an application that lets users see satellite and aerial photos of the Earth as well as 3D terrain models in interactive form. Google Earth also contains additional 3D satellite images, 3D building models, and maps. Google Earth Data Organization Google Earth also stores different types of data within its database. Data is organized by location and feature. Using the GPS

coordinates of a specific location in Google Earth will allow you to access certain types of information. Users can create their own Google Earth data by importing a KML file. This file allows the user to customize the location of the data. After the user selects a location, the Google Earth app will ask if the user wishes to add, delete, or change information. Common features and data types available include: Satellite Images Satellite imagery provides images of the Earth from several different satellites. Street View Street view provides panoramic images of cities taken from the road. Users can change the imagery and driving route to see different locations. 3D Models 3D models provide users with the ability to create 3D models of buildings, cities, roads, and other structures. Historical Imagery Historical imagery provides data from the past. This can include historical maps, aerial photos, and satellite photos. Places Places provide users with the ability to search through Google Maps for places they are looking for.
