WIC is responsible for ink in the ink cartridges The use of the WICÂ .Q: How to trigger a function when a private variable changes in JavaScript? I have a class in JavaScript and I am trying to create a simple game of Rock-Paper-Scissors. I am running into an issue where I want to have a set of functions run when a user plays a certain move. I have a class and I am using it like so: var

player = new Player(); var computer = new Computer(); player.update() works to update the UI after a user does what they want on the canvas. player.play() works to run a function when they click a button for a move. computer.play() also works. The issue is that the player. c6a93da74d
